# EQ Content Discover

With the introduction of the General Data Protection Regulation (GDPR), it is now more important than ever that organisations provide individuals with the right to access what information they hold on them. But how is this possible if you do not know what data you have on them or where the data is held?

## OUR SOLUTION

Discover is a software product that helps organisations discover sensitive and personal identifiable information (PII) within all types of structured and unstructured data. Discover is a sensitive data discovery tool within the EQContent suite.

EQContent is a collection of modules which together empower and enable an organisation to manage their content and records for their entire lifecycle. EQ Content Discover can be purchased Individually or as part of the entire EQContent product bundle.

Our solution scans all data held in an organisation and will then produce a report in real-time on what data has been discovered. This makes it easy to securely identify, tag, retrieve, delete or encrypt identified sensitive and personal data, reducing the risk of not complying with data protection legislation, enabling organisations to have instant access to data for Subject Access Requests and allowing them to tag content containing sensitive information that may be relevant to legal proceedings or company policy.

## KEY FEATURES

- Discover sensitive and PII information in structured and unstructured repositories
- Connect to file shares, SharePoint, Outlook, Office 365 etc
- Scans all versions of word, excel, PowerPoint, PDF etc
- Artificial intelligence with pattern patching to ensure accuracy
- Interactive reporting to make informed decisions
- Remove duplicate, obsolete, redundant and trivial documents
- Automated process for SAR and FOI requests
- Direct export of PDF or word summary to requester
- Full audit trail showing enquiry, dates and response
- Removal of documents containing sensitive information

## KEY BENEFITS

- Action subject action requests, including content identification
- Cost effective
- Helps Compliance with data protection and GDPR legislation
- Access to real-time data
- Discover sensitive content in dark data repositories
- Tagging of sensitive content for retention, disposal or review actions
